DETAILED ACTION

Election/Restrictions

1. This application is in condition for allowance except for the presence of claims 16-19 directed to an invention non-elected with traverse in the reply filed on 3/10/2009. Applicant is given TWO MONTHS from the date of this letter, whichever is longer, to cancel the noted claims or take other appropriate action (37 CFR 1.144). Failure to take action during this period will be treated as authorization to cancel the noted claims by Examiner's Amendment and pass the case to issue. Extensions of time under 37 CFR 1.136(a) will not be permitted since this application will be passed to issue.

The prosecution of this case is closed except for consideration of the above matter.

Allowable Subject Matter

2. Claims 1-15 are allowed.

Remarks filed on 7/15/10 have been found persuasive. The claimed activation process performs a different function than the regeneration/metal removal process taught in McVicker '928. There is further no suggestion in the prior art that an additive with the claimed properties of a boiling point in the range of 80-500°C with a solubility of at least 5g/L in water should be contacted with the catalyst in either an activation process or the regeneration process taught in McVicker '928. Other prior art such as Kamo, et al. (US 5,162,281) does discuss the use of an organic acid with a group VIB

and group VIII metal containing catalyst, but this is done during the production of the catalyst before it is formed, and not as an activating step.

Examiner would like to note, however, that the applicants incorrectly indicate in the arguments that the presence of at least 50% of the additive maintained in the catalyst is positively required. The claims recite that the drying step and the limitation regarding the additive is "optionally followed". If this was not the intention, claims should be amended accordingly.
